SONIFEX LAUNCHES MONITOR CONTROLLER LINE

IRTHLINGBOROUGH, ENGLAND — Sonifex's new Reference Monitor Controllers are a range of 1-rack-unit audio production control units, providing source selection, volume, dim and cut controls for external analog monitors, together with light controls for the Sonifex Signalled range of studio signs, or similarly controlled equipment.

Four monitor controllers are available: the RM-MC1L, a single stereo input and output with light control; the RM-MC4L, with four stereo inputs, one stereo output with light control; the RM-MC51L, 5.1

stereo inputs and outputs with light control and the RM-MCL, a monitor light controller, three-button, TX-STANDBY-REH.

Each product has a light control section with three buttons: Transmit (TX), Standby and Rehearse (REH). The TX and REH buttons control opto-isolated outputs on the rear panel remote connector, and these provide a direct control interface to the Sonifex Signalled illuminated studio sign, allowing twin signs to be controlled individually.

The remote port also has open-collector tally outputs for Transmit (TX), Rehearse (REH), as well as remote input control for the audio controls dim and cut, and the light controls TX, Standby and REH. There is also a 12 V source at 200 mA maximum.

For information, contact Sonifex in England at telephone: +44-1933-650-700, or visit www.sonifex.co.uk.
