## Sonifex premieres CM-CU1 commentator unit

Audio and video equipment manufacturer Sonifex (**booth 4T2-06**) is showcasing the new CM-CU1 commentator unit that provides a fully featured commentator position and a line-level input.

It has an individual commentator output, with an additional output providing a mix of commentator and line input audio.

The line input can be configured to remain present at the mix output even if the com-

mentator is off the air, making it useful for routing crowd effects or pre-recorded material to the programme feed.

"The CM-CU1 is the latest addition to our range of commentary products," said Eamonn Heffernan, Sonifex's sales manager.

"It offers the same high quality and robust specification as the CM-CU21, with a feature set tailored to single commentator applications," he concluded.
