

**Sonifex'** announced the Redbox RB-VHDDD8 Dolby E and Dolby Digital decoder and extractor. It extracts 16 channels of audio within any audio group of an SDI video signal and a further two which are sent to the Dolby decoder. Up to 10 channels from the decoder or any of the 16 channels from the de-embedder can then be re-embedded onto either of the two SDI outputs and also transmitted on a BNC or D-type situated on the rear panel.
